

Silicon rubber

Characteristics, use and maintenance

The material

Silicon rubber is an elastometric polymer containing silicon and oxygen atoms. The compound is stable and irreversible, the mechanical and elastic properties of the material do not undergo variations in temperature ranges that can fluctuate from -100 to 250 °C. The particular characteristics of silicon rubber are its softness, total non-toxicity (both an ideal application where the material comes into direct contact with the body and with water given its total resistance to oxidation to solvents) The flexibility allows to remove easily the limescale that settles during the use of the product.

Ordinary cleaning

For the daily maintenance of silicon rubber shower heads and showers, it is enough to clean the product regularly after use to avoid the accumulation of dirt and limescale, for ordinary cleaning use warm water and soap, or common detergents to remove most of the dirt and stains that may have settled on the surface.

How to prevent damages

To prevent stubborn stains, do not leave soap or shampoo residue on the surface, prolonged contact may stain the surface. Do not place lit cigarettes or flames that could irreversibly damage the material.

Some chemical-based substances, normally used for hygiene and cleaning, such as: acetone, paint removers, bleach, perfumes, aftershave or very aggressive disinfectants can permanently damage the silicon rubber, so it is necessary to leave no residues on the surface and clean them as soon as possible.

Do not use powdered cleaning products that need to be scrubbed on the surface.

The guarantee does not cover damages caused by:

- Wrong or improper maintenance
- Modifications without authorization or improper use
- Use outside the ambient settings foreseen for the product
- Improper physical or chemical use
- Damage caused by non-compliance with the procedures regarding assembly and installation
- Wrong preparation or maintenance of the place where the product is installed
- Any other improper use how long described, including repair or other interventions maintenance by personnel not authorized by producer
- Extraordinary events
